

C Programming Escape Sequences

\n - New Line

Meaning: Moves the cursor to the beginning of the next line on the screen.

Code Example: `printf("Hello\nWorld");`

Output: Hello
World

\t - Horizontal Tab

Meaning: Inserts a blank space (tab space, like pressing Tab on a keyboard) horizontally.

Code Example: `printf("Hello\tWorld");`

Output: Hello World

\a - Alarm or Beep

Meaning: Triggers an audible alert or beep sound from the computer speaker.

Code Example: `printf("\aWarning!");`

Output: Beep sound + Warning!

\b - Back Space

Meaning: Moves the cursor one position backward, erasing or overwriting the previous character if text follows.

Code Example: `printf("Hi\bHello");`

Output: HHHello (the 'i' is replaced by 'e', or backspaced over)

\\ - Backslash

Meaning: Allows you to print a literal backslash character (\) on the screen.

Code Example: `printf("C:\\my_folder");`

Output: `C:\my_folder`

\' - Single Quote

Meaning: Allows you to print a single quotation mark (') inside a string.

Code Example: `printf('It\'s C programming');`

Output: `It's C programming`

\" - Double Quote

Meaning: Allows you to print a double quotation mark (") inside a string literal.

Code Example: `printf("He said \"Hello\")`

Output: `He said "Hello"`

\v - Vertical Tab

Meaning: Moves the cursor down vertically by a few lines.

Code Example: `printf("Hello\vWorld");`

Output: `Hello (vertical space) World`

\0 - NULL Character

Meaning: Represents the end of a string (null terminator). It prints nothing but marks where a string stops in memory.

Code Example: `char str[] = "Hello\0World"; printf("%s", str);`

Output: `Hello (stops printing at \0)`
